

AMENDMENTS TO THE CLAIMS

Please replace the existing listing of claims with the following:

1. **(Currently Amended)** A wireless communications device configured for use in a wireless network comprising:

a processor for controlling operation of the wireless communications device;

a first input device coupled to the processor for accepting an input;

at least one display device coupled to the processor for communicating an output;

a communications subsystem coupled to the processor for communicating with the wireless network;

a memory coupled to the processor;

a storage device coupled to the processor; and

a user interface for controlling the operations of the wireless

communications device including a component to compose a destination for an outgoing communication generated by the device, said component providing simultaneously together:

a prompt defining a field for receiving the destination as text; and

a hot list of candidate destinations selectable at the user interface and usable as the destination,

wherein the user interface comprises a home screen component from which to invoke a feature from among a plurality of features provided by the device; and wherein the component to compose a destination is invokable from the home screen component automatically in response to an input from the first input device of a portion of the destination.

2. **(Currently Amended)** The wireless communications device of claim 1, wherein the first input device is including: a key-based input device to input the destination.

3. **(Cancelled)**
4. **(Currently Amended)** The wireless communications device of claim [[3]] 1 wherein the destination is a telephone number to be called and the input is a portion of a telephone number.
5. **(Currently Amended)** The wireless communications device of claim [[3]] 1 wherein the portion of the destination populates the prompt when the component to compose a destination is invoked.
6. **(Original)** The wireless communications device of claim 1 wherein the component to compose a destination is invokable in response to at least one of: an interaction with a home screen component of the user interface from which to invoke a feature from among a plurality of features provided by the wireless communications device; and an auxiliary input device.
7. **(Currently Amended)** The wireless communications device of claim [[3]] 1 wherein the component to compose a destination is further invokable in response to at least one of: an interaction with the home screen component of the user interface; and an auxiliary input device.
8. **(Original)** The wireless communications device of claim 1 wherein the component to compose a destination is enabled to move between the prompt and hot list.
9. **(Original)** The wireless communications device of claim 1 wherein the component to compose a destination is adapted to provide a filtered list of destinations from a store of destinations on the device in response to a filter input received at the user interface, said filtered list selectable at the user interface to choose a destination.
10. **(Original)** The wireless communications device of claim 1 wherein the prompt is adapted to permit navigating and changing the destination while composing.

11. **(Original)** The wireless communications device of claim 1 wherein the component to compose a destination is adapted to provide at least one action button for terminating composition of the destination.

12. **(Currently Amended)** In a wireless communications device configured for use in a wireless network, a method for composing a destination for an outgoing communication generated by the device comprising:

providing a home screen from which to invoke a feature from among a plurality of features provided by the wireless communications device;

invoking a composition screen from the home screen automatically in response to input of a portion of the destination;

providing the [[a]] composition screen;

providing, simultaneously with the composition screen, a prompt defining a field for receiving the destination as text; and

providing, simultaneously with the composition screen, a hot list for selecting the destination, the hot list comprising candidate destinations selectable as destinations.

13. **(Original)** The method of claim 12 including:
receiving the destination using the prompt in response to a key-based input.

14. **(Cancelled)**

15. **(Currently Amended)** The method of claim [[14]] 12 wherein the destination is a telephone number to be called.

16. **(Currently Amended)** The method of claim [[14]] 12 comprising populating the prompt with the portion of the destination.

17. **(Cancelled)**
18. **(Original)** The method of claim 12 comprising moving between the prompt and hot list in response to navigation about the composition screen.
19. **(Original)** The method of claim 18 comprising receiving the destination selected from the hotlist and generating the outgoing communication in response.
20. **(Original)** The method of claim 13 comprising providing a filtered list of destinations from a store of destinations on the wireless communications device in response to a filter input at the user interface, said filtered list selectable to choose the destination.
21. **(Original)** The method of claim 12 comprising receiving the destination and generating the outgoing communication in response.
22. **(Original)** The method of claim 12 comprising providing a cursor adapted for use in navigating and changing the destination while composing.
23. **(Original)** The method of claim 12 comprising providing at least one action button for terminating composition of the destination.
24. **(Currently Amended)** A computer program product having a computer readable medium tangibly embodying computer executable code stored thereon for composing a destination for an outgoing communication generated by a wireless communications device for use in a wireless network, said computer program product comprising:
code for providing a user interface comprising a home screen component from which to invoke a feature from among a plurality of features provided by the device;
code for invoking a composition screen from the home screen component automatically in response to an input from an input device of a portion of the destination;
and

code for [[a]] the composition screen providing simultaneously together:

a prompt defining a field for receiving the destination as text; ~~and~~

a hot list usable for selecting the destination, the hot list comprising candidate destinations usable as the destination.
